

Report Description

Title: Transmission Facility Outage Limits Report (Days 0 to 2)

Confidentiality: Public

Purpose: The purpose of this report is to list the transmission limits during outages for impacted internal and intertie transmission facilities interfaces

1. Created Date/Time - The date and time when the report was published
2. Limits Occurring within Content Time Period will be displayed on the report
3. Transmission Facilities Interface - Name of impacted intertie or internal transmission facilities interface
4. Issued Date/Time - The date and time when the limit was issued
5. Start Date/Time - The start date of the outage limit
6. End Date/Time - The end date of the outage limit
7. Operating Limit - This describes the operating limit in MW as a result of the outage elements. Refer to the Ontario Transmission System document for information on the Transmission Interfaces. Internal system conditions impacting interties are reflected here, since it would not change the interchange scheduling limit.
8. Interchange Scheduling Limit - This describes the scheduling limit in MW as a result of the outage elements. Intertie scheduling limits consider the physical capacity of the tie-lines to transfer energy between each intertie zone and Ontario. Please refer to [Scheduling Limits and Intertie Prices document](#) for more information on the impact of intertie scheduling limits on intertie zone prices. External outages affecting the interchange scheduling limit will not be published. Please refer to the corresponding neighbouring jurisdiction's limit publishing for that information.
9. Comments - comments regarding the limit

Frequency: Twice per Hour
